

WILEY

Artificial Intelligence

General Guidance & Best Practice

Authors may wish to use artificial intelligence tools or technologies (“AI Technology”) when preparing a manuscript for submission to a Wiley journal. Wiley welcomes the thoughtful use of AI tools. When used responsibly, authors can maintain high editorial standards, safeguard intellectual property and other rights, and foster transparency with readers. While authors remain fully accountable for their submission, published articles, and any tools or sources they use in its creation, Wiley recognizes AI Technology’s growing role in the research process and manuscript preparation and provides the following guidance.

- **Review Terms and Conditions**

Authors should carefully review the terms and conditions, terms of use, or any other conditions or licenses associated with their chosen AI Technology. Authors must confirm that the AI Technology does not claim ownership of their content or impose limitations on its use, as this could interfere with the author’s rights or Wiley’s rights, including Wiley’s ability to publish a submission following acceptance. Authors should periodically revisit the AI Technology terms to ensure continued compliance.

- **Human Oversight**

Authors may only use AI Technology as a companion to their writing process, not a replacement. As always, authors must take full responsibility for the accuracy of all content, and verify that all claims, citations, and analyses align with their expertise and research. Before including AI-generated content in a journal submission, authors must carefully review it to ensure the final work reflects their expertise, voice, and originality while adhering to Wiley’s ethical and editorial standards.

- **Disclosure**

Authors should maintain documentation of all AI Technology used, including its purpose, whether it impacted key arguments or conclusions, and how they personally reviewed and verified AI-generated content. Authors must also disclose use of AI Technologies upon submission to a Wiley journal. If not provided, this may be requested during the

submission and peer review process, or after publication. Transparency is essential to Wiley's commitment to ethical publishing and integrity. (Please see the additional, specific guidance regarding authorship and disclosure below.)

- **Rights Protection**

Authors must not use any AI Technology that restricts their own, Wiley's, or any other party's use of the submission. This includes ensuring that the AI Technology used and the provider of that AI Technology does not gain any rights over the author's underlying content, including the right to "train" their AI Technology on the content, besides the limited right to access and use the submission to perform the service. By reviewing an AI Technology's terms and conditions for clauses such as "ownership," "data reuse," or "opt out" among others, authors can prevent unintended rights transfers.

- **Responsible and Ethical Use**

Authors must use AI Technology in a manner that aligns with privacy, confidentiality, and compliance obligations. This includes respecting data protection laws, avoiding the use of AI to replicate unique styles or voices of others, and fact-checking AI-generated content for accuracy and neutrality. Authors should be aware of potential biases in AI outputs and take steps to mitigate stereotypes or misinformation. When inputting sensitive or unpublished content, authors should use tools with appropriate privacy controls to protect confidentiality.

- **Adherence to Agreements**

Authors must adhere to the terms and conditions of their publishing agreement with Wiley. Authors remain responsible for upholding the warranties in those agreements, such as ensuring their submission is original, not previously published, and that they have the right to grant the necessary permissions to Wiley as set forth in their agreement.

Wiley values authors' unique creativity and expertise and views AI Technologies as tools that enhance rather than replace creativity. Wiley remains committed to providing clear guidance that fosters trust with readers, protects authors' and Wiley's rights, and ensures high-quality content. These guidelines will evolve as technology and author needs advance. For reference, please also see the STM general [guidance](#) for all stakeholders in scholarly publishing regarding the role of generative AI technologies.

Specific Guidance

Disclosure: If an author has used AI Technology to develop any portion of a manuscript, its use must be described, transparently and in detail, in the Methods section (or via a disclosure or within the Acknowledgements section, as applicable). The author is fully responsible for the accuracy of any information provided by the tool and for correctly referencing any supporting work on which that information depends. GenAI tools must not be used to create, alter, or manipulate original research data and results. Tools that are used to improve spelling, grammar,

and general editing are not included in the scope of these disclosure guidelines. The final decision about whether use of a GenAI tool is appropriate or permissible in the circumstances of a submitted manuscript or a published article lies with the journal's editor or other party responsible for the publication's editorial policy.

AI & Authorship: AI Technology cannot be considered capable of initiating an original piece of research without direction by humans. Tools cannot be accountable for a published work or for research design, which is a generally held requirement of authorship (as discussed in the Authorship section in these guidelines), nor does it have legal standing or the ability to hold or assign copyright. Therefore—in accordance with [COPE's position statement on Authorship and AI tools](#)—these tools cannot fulfil the role of, nor be listed as, an author of an article.
